

**PRESS RELEASE****SCHAUMANN SAUENFIT 1312:****the liquid Vitamin B12 supplement for sows**

The new liquid special product SCHAUMANN SAUENFIT 1312 increases sow vitality during the perinatal period.

Ensuring ideal conditions and keeping the sow healthy during the perinatal period is a key aspect of piglet production. Increased litter sizes often mean long and exhausting births, so it is important for the sows to be able to mobilise additional energy reserves.

SCHAUMANN SAUENFIT 1312 liquid supplement supports the energy metabolism and lessens the impact of the post-partum energy dip.

The product contains high levels of Vitamin B<sub>12</sub>, which is involved in a series of metabolic processes. It supports cell division, the formation of new cells, blood formation and the production of coenzymes. SCHAUMANN SAUENFIT 1312 provides ideal support for vitality and regeneration in the post-farrowing period as well.

Field trials confirm increased vitality, faster farrowing and earlier milk let-down.

The liquid active ingredient is available as 6 x 1 kg containers and 10 kg containers. Using the dosing unit, the quantity required can be added directly to the sow's trough at feeding times.
