

JORENKU Calci-Liq

JORENKU Calci-Liq

To achieve the full genetical potential, modern poultry farming requires a supplement of important nutrients to support the growth and health among layers and broilers.

Calci-Liq is a unique liquid supplementary feed with concentrated vitamin D₃ (Hy-D) combined with calcium and magnesium, which supports the formation of the skeleton and increases the strengths of the eggshell.

Calci-Liq can be used for both layers and broilers. By adding Calci-Liq to the drinking water, the supplementary feed is digested more easily and the poultry get the optimal benefits from the nutrients.

Laying hens: Calci-Liq strengthens the formation of the eggshell and thus contributes to ensure high quality eggs.

Broilers: Calci-Liq strengthens the skeleton and muscular system and thus contributes to the growth and strengthening of the immune system.

Calci-Liq is available as 5 kg, 10 kg and 25 kg cans and as 200 kg drums.

JOENKU Calci-Liq

Calci-Liq Liquid supplementary feed

- Supports the formation of the eggshell and gives eggs of high quality.
- Strengths legs, skeleton and muscular system.
- Releases calcium/phosphorus for a better utilisation of the feed.
- Gives a boost of calcium/phosphorus, D₃ (Hy-D) and vitamin K₃.

Composition
Calcium chloride
Magnesium chloride
Phytase
Vitamin D ₃ (Hy-D)
Vitamin K ₃

Product	Calci-Liq
Packaging	5 kg can 10 kg can 25 kg can 200 kg drum
Dosage	Laying hens 1 L per 1000 L drinking water Broiler 1-2 L per 1000 L drinking water
